

RM PAYMENT PROCESSING

In-house payment processing solution

Restaurant Manager offers in-house payment processing services for a superior integrated point-of-sale experience. For a limited time, you will also receive a FREE EMV Terminal for every POS station when you sign up with RM Payments!

Free EMV Terminals

Support EMV chip card transactions with tip adjustment, accept MasterCard's new BIN cards and ensure compliance with PCI's new TLS requirements!

Why RM Payments?

Prevent fraud. If you are not accepting EMV, you are leaving your business vulnerable to counterfeit credit card fraud.

Reduce liability. POS processing that relies on SSL encryption is no longer PCI compliant and must be upgraded to a solution that uses more secure TLS encryption. The latest version of RM not only works with EMV terminals, but it's also PA-DSS certified, which reduces liability for data security breaches.

Avoid fines. Mastercard's latest credit cards use a new Bank Identification Number (BIN) and POS systems must be updated to accept these new cards or you can be fined an assessment fee up to \$20,000 per occurrence.
